

Act Report

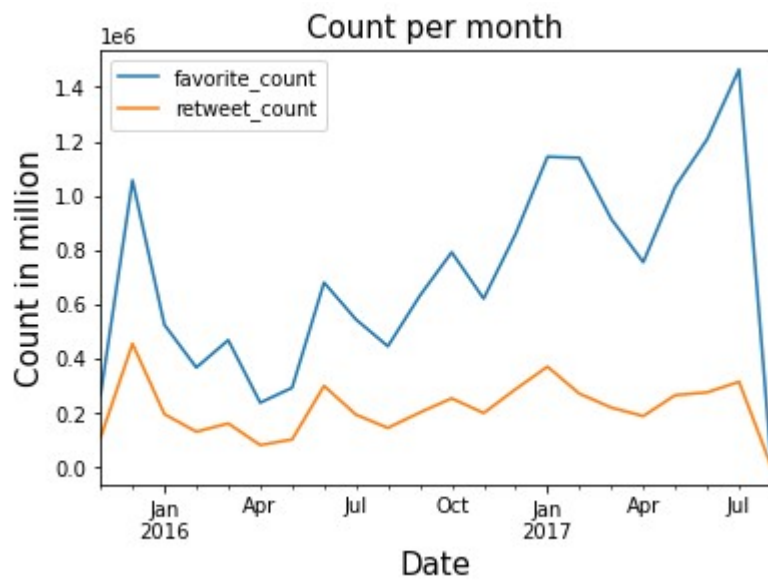

by Abdelrahman Talaat

After Data was cleaned and added to a master dataframe several insights were found out:-

First, Most common dog names:

Second, That retweet and like count correlate so we can just add them up in a single row, which is shown in the graph below

Third insight: WeRateDogs' ratings is based off the photo's quality instead of the popular opinion as their ratings don't align with the most popular dog types (or they just have different preferences).

Fourth insight: most popular dog type

both third and fourth insight are proven by the two graphs below:
